

1. Problem Statement

Achieving an efficient and collaborative approach to the delivery and installation of Golden Eagle Infill wells .

2. Aims

Working with supply chain partners to identify efficiency and optimization opportunities as part of the well Golden Eagle infill well delivery program..

3. Method

Supplier engagement to identify/assess potential methodology and technology opportunities across the delivery process. Using lessons learnt and Oil and Gas UK standardisation themes.

4. Impact

- Functional, fit for purpose solution;
- Offshore schedule optimisation to achieve accelerated installation and commissioning;
- Vessel campaign sharing via integrated operator DSV contract;
- Future proofed subsea control system allowing ease of integration of additional wells;
- Standard industry and field specific interfaces.
